

PANAVISION EQUIPMENT CLEANING ADVISORY

SEPTEMBER 27, 2020

Panavision and our entire family of companies are fully committed to the health and safety of our employees and customers, and the safe use of equipment during this Covid-19 pandemic. Our goal is to create and manage a safe workplace and environment, mitigating any risk to you and the equipment you use, while continuing to deliver the highest quality of service and collaboration that you have always experienced with us.

In doing so, we have put together an extensive communication on the cleaning and disinfectant products and methods that can be safely used on motion picture imaging equipment (encompassing camera, optics and lighting) that can be found at www.panavision.com/covid or by scanning the following QR code at the bottom of this page.

Panavision does not support the use of any fogging and/or atomized solutions as a disinfectant or cleaning method as it presents risk and potential damage to the photographic equipment.

Although effective on most commercial equipment, there is little or no control over the level of chemical penetration and moisture that may enter into the electronics, imaging sensor and/or optical coatings on lenses, resulting in potential damage. In addition, it may also cause severe damage to delicate surface materials, fabrics and textiles used in lighting equipment, as the applied solution is then left on the surface to evaporate, causing undo oxidization and long-term damage.

We at Panavision greatly appreciate your continued support and understanding as we navigate through these unprecedented times.

Sincerely,

Panavision
